Education

Ph.D. in Statistics, Ewha Womans University	Sep 2022 – Aug 2025
MBA in AI Big Data, aSSIST	Mar 2020 – Feb 2022
M.S. in Statistics, Ewha Womans University	Sep 2013 – Aug 2015
B.S. in Statistics (Minor in Law), Ewha Womans University	Mar 2008 – Aug 2013

Professional Experience

Data Scientist, Lunit Inc. – Cancer Screening AI Research Dept. Mar 2021 – Present

- Designed and led development of `research-cs-evaluation`, an internal library for lesion-level performance metrics (ROC, FROC, AFROC, bootstrapping, DeLong test, etc.), now adopted across all cancer screening AI pipelines.
- Developed a multi-anchor threshold shifting strategy to guarantee predefined sensitivity levels at product thresholds; collaborated with MA, PM, and Marketing teams to align statistical rigor with clinical usability and regulatory requirements.
- Performed model score calibration (e.g., Platt scaling, isotonic regression) to align AI-predicted probabilities with observed cancer prevalence, supporting reliable threshold selection and clinical interpretability.
- Built a model consistency evaluation framework for AI releases, defining acceptance criteria that capture user-impacting prediction changes to ensure clinical interpretability and stability.
- Led statistical validation of MMG and DBT AI models on multi-institutional datasets (KBSMC and external hospitals), supporting peer-reviewed publications and clinical study planning.
- Researched machine learning integration of AI-derived mammography and density scores (4-view, 8 features) to assess potential improvements in breast cancer detection.
- Conducted FDA submission-oriented analyses for DBT models, including large-scale performance evaluation and development of automated reporting code to generate regulatory-ready result summaries.
- Co-authored 6+ peer-reviewed publications in international journals and conferences, contributing expertise in study design, statistical validation, and AI evaluation methodology.

Biostatistician / Data Manager, Medytox Inc. May 2017 – Feb 2021

- Conducted statistical analysis for 10+ Phase I/III clinical trials (e.g., CORTOX, MT921), including SAP design, efficacy/safety analysis, and CDISC-standard reporting.
- Developed validated SAS programs for endpoint evaluation and regulatory submissions.
- Prepared ADaM/SDTM datasets and wrote statistical sections of integrated reports.
- Led data review and blind meeting preparations in collaboration with clinical, QA, and RA teams.
- Designed CRFs and DVPs, executed UAT, and supported EDC system deployment as a dual-role data manager.

Biostatistician, Catholic Medical Center Aug 2016 – May 2017

- Provided statistical consulting for investigator-initiated research across multiple hospitals within the Catholic Medical Center network.
- Supported clinicians in study design, sample size calculation, and statistical interpretation for diverse clinical specialties.
- Conducted survival analysis (Cox), PSM, GLMM, and AUC comparison (DeLong) using R.
- Authored IRB proposal sections and contributed to several clinical publications.

Publications

Accelerated increase in ferritin levels during menopausal transition as a marker of metabolic health Aug 2025

Minjeong Kim, Yoosoo Chang, Yoosun Cho, Min-Jung Kwon, Hee-Kyung Joh, Ga-Young Lim, Ria Kwon, Jiin Ahn, Jungeun Park, Kye-Hyun Kim, Jae Keun Yoo, Seungho Ryu

Scientific Reports

DOI: 10.1038/s41598-025-14295-3

From Pixel Scores to Clinical Impacts: The Implicit Choices in FROC Metric Design and Their Consequences

Feb 2025

Minjeong Kim, Hesham Dar, Sanguk Park, Thijs Kooi

AMAI 2024 (Proceedings published Feb 2025)

DOI: 10.1007/978-3-031-82007-6_2

Pseudonymization's Effect on Data Quality: A Study Under Personal Information Protection Act

Jun 2024

Minjeong Kim, Jae Keun Yoo

The Korean Journal of Applied Statistics

DOI: 10.5351/KJAS.2024.37.3.381
